

## F81 | 305015

**Description** F81 is a cell line derived from the F81 cell line. It is a derivative of the F81 cell line, which was established from a primary culture of cells. The cells are maintained in a medium containing FCS (Fetal Calf Serum) and are characterized by their ability to form colonies in soft agar. The cells are used for the study of cell growth and differentiation.

**Organism** Human

**Tissue** Fibroblast

**Synonyms** F-81, FK81, FK81

**Age** 3 months

**Gender** Male

**Morphology** Fibroblast, epithelial

**Growth properties** Adherent

**Citation** F81 (ATCC CCL-9259) (305015)

**Biosafety level** 1

**NCBI\_TaxID** 9685

**CellosaurusAccession** CVCL\_9259

**Culture Medium** EMEM (MEM Eagle) 2x, 20% FCS, 2.2 mM NaHCO3, EBSS (820100a)
