

Product sheet

NCI-H929 | 305236

General Information

Description	NCI-H929 is a cell line derived from a patient with metastatic melanoma. It is a highly tumorigenic cell line that grows in soft agar and is capable of forming xenografts in immunodeficient mice. The cell line is characterized by its ability to form large, multicentric colonies in soft agar and its high tumorigenicity in immunodeficient mice. It is a highly tumorigenic cell line that grows in soft agar and is capable of forming xenografts in immunodeficient mice. The cell line is characterized by its ability to form large, multicentric colonies in soft agar and its high tumorigenicity in immunodeficient mice.
Organism	Human
Tissue	Melanoma
Disease	Melanoma
Metastatic site	Metastatic
Synonyms	NFCI H929, NCIH929, H929, H929, H-929

Cell Characteristics

Age	62
Gender	Male
Ethnicity	White
Morphology	Epithelial
Cell type	Epithelial
Growth properties	Highly tumorigenic

Identification and Safety

Citation	NCI-H929 (NCI Cell Line) 305236
Biosafety level	1
NCBI_TaxID	9606
CellSaurusAccession	CVCL_1600
