**HET-1A | 305270**

**General Information**

<b>Description</b>	HET-1A is a cell line derived from a 74-year-old male patient with a melanocytic nevus. The cells were established in 1974 and are maintained in DMEM supplemented with 10% fetal bovine serum (FBS) and 1% penicillin-streptomycin. The cells are characterized by their ability to form colonies in soft agar and their tumorigenicity in nude mice. The cell line is maintained in a continuous culture and is available for research purposes.
