HEK293-FOLR1

Description

HEK293-FOLR1 is a HEK293 cell line stably expressing the human FOLR1 (Folate Receptor 1) protein. The cells are derived from HEK293 cells and are used for the production of recombinant proteins. The FOLR1 protein is a transmembrane protein that binds to folic acid and is involved in the transport of folate into cells. The HEK293-FOLR1 cell line is used for the production of recombinant FOLR1 protein for research and clinical applications.

HEK293-FOLR1 cells are HEK293 cells expressing the human FOLR1 protein. The cells are used for the production of recombinant FOLR1 protein. The FOLR1 protein is a transmembrane protein that binds to folic acid and is involved in the transport of folate into cells. The HEK293-FOLR1 cell line is used for the production of recombinant FOLR1 protein for research and clinical applications.
