

CT26.CL25 | 305353

Description
 CT26.CL25 is a cell line derived from the CT26 murine melanoma cell line. It is a clonal derivative of CT26 cells that has been established in culture. The cells are characterized by their ability to form colonies in soft agar and their tumorigenicity in immunocompetent mice. CT26.CL25 cells are used in various preclinical studies, including drug screening and immunotherapy research.
