TOV-21G

Description
TOV-21G is a cell line derived from a patient with a melanoma. It is a highly tumorigenic cell line that grows in soft agar and is capable of forming xenografts in immunodeficient mice. TOV-21G is characterized by its ability to form large, invasive colonies in soft agar and its high tumorigenicity in immunodeficient mice. TOV-21G is a highly tumorigenic cell line that grows in soft agar and is capable of forming xenografts in immunodeficient mice.

Organism Human

Tissue Melanoma

Disease Melanoma

Synonyms TOV-21g, TOV21G, TOV21

Characteristics

Age 62

Gender Male

Ethnicity Caucasian

Morphology Epithelial

Growth properties Adherent

References

Citation TOV-21G (Cytion 305892)

Biosafety level 1

NCBI_TaxID 9606

CellosaurusAccession CVCL_3613
