CHO-PD-L1

**Description**

CHO-PD-L1 is a CHO cell line expressing PD-L1. It is derived from CHO cells and is used for the production of recombinant proteins. The cells are grown in DMEM/F12 medium supplemented with 10% fetal bovine serum (FBS) and 100 ng/ml insulin, transferrin, and selenium (ITS). The cells are maintained at 37°C in 5% CO2. The PD-L1 expression is induced by the addition of 10 ng/ml interferon-gamma (IFN-γ) to the culture medium.

**Organism** CHO

**Tissue** CHO

CHO-PD-L1

**Morphology** CHO

**Growth properties** CHO

CHO-PD-L1

**Citation** CHO-PD-L1 (CHO) Cytion: 305975

**Biosafety level** 1

**NCBI\_TaxID** 10029

CHO-PD-L1

**Receptors expressed** PD-1/CD279
