

Product sheet

Hep-55.1C | 400201

General Information

Description	Hep-55.1c is a cell line derived from a rat hepatoma. It is a continuous cell line that grows in suspension. The cells are of the C57BL/6J strain. Hep-55.1c is a cell line that is highly tumorigenic and is used for the study of liver cancer. The cells are highly sensitive to p53 inhibitors. Hep-55.1c is a cell line that is highly tumorigenic and is used for the study of liver cancer. The cells are highly sensitive to p53 inhibitors.
Organism	Rat
Tissue	Liver
Disease	Hepatocellular carcinoma
Synonyms	HEP-55.1C, 55.1C

Characteristics

Breed/Subspecies	C57BL/6J
Age	Adult
Gender	Male
Morphology	Epithelial
Growth properties	Adherent

Identification

Citation	Hep-55.1C (ATCC CRL-1573) 400201
Biosafety level	1
NCBI_TaxID	10090
CellosaurusAccession	CVCL_5766

Additional Information
