IM-9 | 302151

IM-9 | 302151

**Description** IM-9 is a human myeloid leukemia cell line established in 1967. It is a continuous cell line that grows in suspension. The cells are characterized by their morphology and growth properties. IM-9 is a myeloid leukemia cell line that is used for research in leukemia. It is a continuous cell line that grows in suspension. The cells are characterized by their morphology and growth properties. IM-9 is a myeloid leukemia cell line that is used for research in leukemia. It is a continuous cell line that grows in suspension. The cells are characterized by their morphology and growth properties.

**Organism** Human

**Tissue** Bone marrow

**Synonyms** IM-9, GM04680

IM-9 | 302151

**Age** 1-10

**Gender** Male

**Ethnicity** Caucasian

**Morphology** Myeloid leukemia cells

**Cell type** Myeloid leukemia cells

**Growth properties** Suspension

IM-9 | 302151

**Citation** IM-9 (IM-9 | 302151)

**Biosafety level** 2

**NCBI\_TaxID** 9606

**CellosaurusAccession** CVCL\_1305
