NCI-H295R

NCI-H295R is a human embryonic kidney (HEK) cell line derived from a human embryo. It is a highly proliferative cell line that is widely used in research.

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

- NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).
- NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).
- NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

- NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).
- NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).

NCI-H295R cells are grown in DMEM medium supplemented with 10% fetal bovine serum (FBS).
