

HK EGFP-LaminB1/H2B-mCherry | 300919

Product information

Description	HK EGFP-LaminB1/H2B-mCherry is a cell line derived from HeLa cells. It expresses EGFP-LaminB1 and H2B-mCherry. The cells are grown in DMEM supplemented with 10% FBS and 1% penicillin/streptomycin.
Organism	Human
Tissue	Embryonic kidney
Disease	None
Metastatic site	None
Applications	Flow cytometry, microscopy, cell cycle analysis, B1 and H2B expression analysis
Synonyms	HK EGFP-LaminB1 H2B-mCherry

Cell characteristics

Age	30 days
Gender	Male
Ethnicity	None
Morphology	Epithelial cells, adherent
Cell type	Embryonic kidney
Growth properties	Fast growing, anchorage dependent

References and safety

Citation	HK EGFP-LaminB1/H2B-mCherry (Accession number: 300919)
Biosafety level	1
