

LMH | 601411

Description

LMH is a highly infectious agent that causes a severe disease in humans. It is a member of the Herpesviridae family and is known for its ability to establish latent infections. The virus is highly stable in the environment and can survive for long periods of time. It is transmitted through direct contact with infected individuals or through contaminated surfaces. The disease caused by LMH is characterized by a high mortality rate and is often fatal. The virus is also known to cause a chronic disease in humans, which is characterized by a long incubation period and a high mortality rate. The disease is caused by a highly infectious agent that is highly stable in the environment and can survive for long periods of time. It is transmitted through direct contact with infected individuals or through contaminated surfaces. The disease caused by LMH is characterized by a high mortality rate and is often fatal. The virus is also known to cause a chronic disease in humans, which is characterized by a long incubation period and a high mortality rate.
