TE-1

**Description** TE-1 is a cell line derived from a patient with a specific condition. It is characterized by its ability to differentiate into various cell types. TE-1 is a pluripotent stem cell line that can be differentiated into various cell types, including neurons, cardiomyocytes, and hepatocytes. It is used for research in regenerative medicine and drug discovery.

**Organism** Human

**Tissue** Embryonic stem cells

**Disease** Parkinson's disease

**Synonyms** TE1

TE-1

**Age** 58 years

**Gender** Male

**Ethnicity** European

**Morphology** Fibroblastic

**Growth properties** Adherent

TE-1

**Citation** TE-1 (Cytion 305060)

**Biosafety level** 1

**NCBI\_TaxID** 9606

**CellosaurusAccession** CVCL\_1759
