

Product sheet

KMH-2 | 305142

General information

Description KMH-2 (ATC) is a small molecule inhibitor of the protein tyrosine kinase (PTK) activity of the Src family kinases (SFKs). KMH-2 is a potent and selective inhibitor of the PTK activity of the SFKs, with an IC50 of 10 nM. KMH-2 is a potent and selective inhibitor of the PTK activity of the SFKs, with an IC50 of 10 nM. KMH-2 is a potent and selective inhibitor of the PTK activity of the SFKs, with an IC50 of 10 nM.

Organism Human

Tissue Liver, Kidney

Disease Cancer

Metastatic site Liver, Kidney

Synonyms KMHDASH2, KMH2

Cellular characteristics

Age 71 days

Gender Male

Ethnicity Caucasian

Morphology HepG2 cells

Growth properties Adherent

References

Citation KMH-2 (Cytion 305142)

Biosafety level 1

NCBI_TaxID 9606
