HEP-64.1

Description HEP-64.1 is a cell line derived from a human liver carcinoma, established in 1964. It is a continuous cell line that grows in suspension culture. The cells are characterized by their high tumorigenicity and ability to form colonies in soft agar. HEP-64.1 cells are highly sensitive to the chemotherapeutic agent cisplatin. The cell line is maintained in DMEM/F12 medium supplemented with 10% fetal bovine serum (FBS). HEP-64.1 cells are highly tumorigenic and form colonies in soft agar. The cell line is highly sensitive to cisplatin. HEP-64.1 cells are highly tumorigenic and form colonies in soft agar. The cell line is highly sensitive to cisplatin.

Organism Human

Tissue Liver

Disease Hepatocellular carcinoma

Synonyms HEP-64.1, 64.1

HEP-64.1

Breed/Subspecies C57BL/6J

Age 1-3 months

Gender Male

Morphology Adherent

Growth properties High

HEP-64.1

Citation HEP-64.1 (HEP-64.1 Cytion 400205)

Biosafety level 1

NCBI_TaxID 10090
