

RAW 264.7-GFP Cells | 305699

General information

Organism	Mouse
Tissue	Ascites
Disease	Mouse leukemia
Synonyms	GFP/RAW264.7

Characteristics

Age	Adult
Gender	Male
Growth properties	Adherent

Regulatory Data

Citation	RAW 264.7-GFP (Cytion catalog number 305699)
Biosafety level	2
NCBI_TaxID	10090
CellosaurusAccession	CVCL_D7C8

Biomolecular Data

Protein expression	GFP
---------------------------	-----

Handling

Culture Medium	RPMI 1640, w: 2.0 mM stable Glutamine, w: 2.0 g/L NaHCO ₃ (Cytion article number 820700a)
Supplements	Supplement the medium with 10% FBS

RAW 264.7-GFP Cells | 305699

Dissociation Reagent	Accutase
-----------------------------	----------

Seeding density	2 to 5 x 10 ⁴ cells/cm ²
------------------------	--

Fluid renewal	3 times per week
----------------------	------------------

Freeze medium	As a cryopreservation medium, we use complete growth medium + 10% DMSO for adequate post-thaw viability.
----------------------	--

Thawing and Culturing Cells	<ol style="list-style-type: none">1. Confirm that the vial remains deeply frozen upon delivery, as cells are shipped on dry ice to maintain optimal temperatures during transit.2. Upon receipt, either store the cryovial immediately at temperatures below -150°C to ensure the preservation of cellular integrity, or proceed to step 3 if immediate culturing is required.3. For immediate culturing, swiftly thaw the vial by immersing it in a 37°C water bath with clean water and an antimicrobial agent, agitating gently for 40-60 seconds until a small ice clump remains.4. Perform all subsequent steps under sterile conditions in a flow hood, disinfecting the cryovial with 70% ethanol before opening.5. Carefully open the disinfected vial and transfer the cell suspension into a 15 ml centrifuge tube containing 8 ml of room-temperature culture medium, mixing gently.6. Centrifuge the mixture at 200 x g for 5 minutes, carefully discard the supernatant containing freezing medium.7. Follow the procedure described under Post-Thaw Recovery
------------------------------------	--

Incubation Atmosphere	37°C, 5% CO ₂ , humidified atmosphere.
------------------------------	---

Shipping Conditions	Cryopreserved cell lines are shipped on dry ice in validated, insulated packaging with sufficient refrigerant to maintain approximately -78 °C throughout transit. On receipt, inspect the container immediately and transfer vials without delay to appropriate storage.
----------------------------	---

**Storage
Conditions**

For long-term preservation, place vials in vapor-phase liquid nitrogen at about -150 to -196 °C. Storage at -80 °C is acceptable only as a short interim step before transfer to liquid nitrogen.
