**Product sheet**

# NS3-CMPK-hLBR1TM-mEGFP Cells | 300986

## General information

| | |
|---|---|
| **Description** | This clonal stable cell line was generated by transfection of a circular plasmid and by Flp recombination followed by drug resistance selection. |
| **Organism** | Human |
| **Tissue** | Endocervix |
| **Disease** | Adenocarcinoma |
| **Metastatic site** | Primary tumor site (endocervix/cervix) |
| **Applications** | Nuclear envelope remodeling; lamin B receptor (LBR) biology; doxycycline-inducible gene expression; HeLa Kyoto FlpIn TREx system; chromatin/lamina interactions; live-cell imaging; conditional depletion studies using NS3-mediated proximity labeling |
| **Synonyms** | HeLa R19 FlpIn TREx H2B-Cherry/NS3-CMPK-hLBR1TM-mEGFP |

## Characteristics

| | |
|---|---|
| **Age** | 30 years |
| **Gender** | Female |
| **Ethnicity** | African American |
| **Morphology** | Epithelial-like |
| **Cell type** | Epithelial cells |
| **Growth properties** | Adherent |

## Regulatory Data

| | |
|---|---|
| **Citation** | NS3-CMPK-hLBR1TM-mEGFP (Cytion catalog number 300986) |
| **Biosafety level** | 1 |
| **NCBI_TaxID** | 9606 |

# NS3-CMPK-hLBR1TM-mEGFP Cells | 300986

| | |
|---|---|
| **CellosaurusAccession** | CVCL_UR51 |
| **GMO Status** | GMO-S1: This HeLa R19 FlpIn TREx derivative contains Flp recombinase-integrated constructs encoding H2B-mCherry and doxycycline-inducible NS3-CMPK-hLBR1TM-mEGFP, with G418 resistance marker. This classification applies only within Germany and may differ elsewhere. |

## Biomolecular Data

| | |
|---|---|
| **Protein expression** | H2B-mCherry and DOx inducible NS3-CMPK-hLBR1TM-mEGFP |

## Handling

| | |
|---|---|
| **Culture Medium** | DMEM, w: 4.5 g/L Glucose, w: 4 mM L-Glutamine, w: 3.7 g/L NaHCO3, w: 1.0 mM Sodium pyruvate (Cytion article number 820300a) |
| **Supplements** | Supplement the medium with 10% FBS, 0.5 mg/mL G418 |
| **Dissociation Reagent** | Accutase |
| **Subculturing** | Remove the old medium from the adherent cells and wash them with PBS that lacks calcium and magnesium. For T25 flasks, use 3-5 ml of PBS, and for T75 flasks, use 5-10 ml. Then, cover the cells completely with Accutase, using 1-2 ml for T25 flasks and 2.5 ml for T75 flasks. Let the cells incubate at room temperature for 8-10 minutes to detach them. After incubation, gently mix the cells with 10 ml of medium to resuspend them, then centrifuge at 300xg for 3 minutes. Discard the supernatant, resuspend the cells in fresh medium, and transfer them into new flasks that already contain fresh medium. |
| **Fluid renewal** | 2 to 3 times per week |
| **Freeze medium** | As a cryopreservation medium, we use complete growth medium (including FBS) + 10% DMSO for adequate post-thaw viability, or CM-1 (Cytion catalog number 800100), which includes optimized osmoprotectants and metabolic stabilizers to enhance recovery and reduce cryo-induced stress. |

## NS3-CMPK-hLBR1TM-mEGFP Cells | 300986

| | |
|---|---|
| **Thawing and Culturing Cells** | 1. Confirm that the vial remains deeply frozen upon delivery, as cells are shipped on dry ice to maintain optimal temperatures during transit.<br>2. Upon receipt, either store the cryovial immediately at temperatures below -150°C to ensure the preservation of cellular integrity, or proceed to step 3 if immediate culturing is required.<br>3. For immediate culturing, swiftly thaw the vial by immersing it in a 37°C water bath with clean water and an antimicrobial agent, agitating gently for 40-60 seconds until a small ice clump remains.<br>4. Perform all subsequent steps under sterile conditions in a flow hood, disinfecting the cryovial with 70% ethanol before opening.<br>5. Carefully open the disinfected vial and transfer the cell suspension into a 15 ml centrifuge tube containing 8 ml of room-temperature culture medium, mixing gently.<br>6. Centrifuge the mixture at 300 x g for 3 minutes to separate the cells and carefully discard the supernatant containing residual freezing medium.<br>7. Gently resuspend the cell pellet in 10 ml of fresh culture medium. For adherent cells, divide the suspension between two T25 culture flasks; for suspension cultures, transfer all the medium into one T25 flask to promote effective cell interaction and growth.<br>8. Adhere to established subculture protocols for continued growth and maintenance of the cell line, ensuring reliable experimental outcomes. |
| **Incubation Atmosphere** | 37°C, 5% $CO_2$, humidified atmosphere. |
| **Shipping Conditions** | Cryopreserved cell lines are shipped on dry ice in validated, insulated packaging with sufficient refrigerant to maintain approximately −78 °C throughout transit. On receipt, inspect the container immediately and transfer vials without delay to appropriate storage. |
| **Storage Conditions** | For long-term preservation, place vials in vapor-phase liquid nitrogen at about −150 to −196 °C. Storage at −80 °C is acceptable only as a short interim step before transfer to liquid nitrogen. |

## Quality Control & Molecular Analysis

## NS3-CMPK-hLBR1TM-mEGFP Cells | 300986

| | |
|---|---|
| **Sterility** | Mycoplasma contamination is excluded using both PCR-based assays and luminescence-based mycoplasma detection methods.<br><br>To ensure there is no bacterial, fungal, or yeast contamination, cell cultures are subjected to daily visual inspections. |
