

CHO-CXCR4 | 305411MH

Product description

Description	CHO-CXCR4-Medium-high is a CHO (Chinese Hamster Ovary) cell line expressing CXCR4 at a medium-high level. It is used for antibody screening, CXCR4-targeted therapy development, HIV entry research, hematopoietic stem cell biology, and flow cytometry. CXCR4, CD184, and other markers are expressed on the cell surface.
-------------	--

Organism	CHO
Tissue	CHO
Disease	Chinese hamster ovary, non-neoplastic; genetically engineered for CXCR4 surface expression (medium-high expression level)
Applications	Antibody screening; CXCR4-targeted therapy development; HIV entry research; hematopoietic stem cell biology; flow cytometry
Synonyms	CHO-CXCR4

Cell characteristics

Age	CHO
Gender	CHO
Morphology	CHO cells
Cell type	Epithelial cells
Growth properties	CHO cells

Product information

Citation	CHO-CXCR4 (CHO cells) (Cytion 305411MH)
Biosafety level	1

XXX CHO-CXCR4 | 305411MH

NCBI_TaxID	10029
CellosaurusAccession	CVCL_A8W0
GMO Status	GMO-S1: This CHO derivative contains a construct driving medium-to-high expression of human CXCR4 for GPCR signaling and ligand-binding analyses. This classification applies only within Germany and may differ elsewhere.

[illegible]

Freeze medium α -MEM (Gibco), 10% FBS (Gibco) + 10% DMSO (Gibco) α -MEM (Gibco), 10% FBS (Gibco) + 10% DMSO (Gibco), CM-1 (Gibco)

CHO-CXCR4 | 305411MH

**Thawing and
Culturing Cells**

1. Thaw the vial rapidly in a water bath at 37°C. Remove the vial as soon as the contents have thawed and transfer the cells to a sterile tube. Centrifuge at 300 x g for 5 minutes. Remove the supernatant and resuspend the cell pellet in 1 ml of complete medium. Seed the cells into a 24-well plate (150,000 cells per well) or a 96-well plate (15,000 cells per well). Incubate at 37°C in 5% CO₂.
2. After 24 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
3. After 48 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
4. After 72 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
5. After 96 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
6. After 120 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
7. After 144 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.
8. After 168 hours, check for cell attachment. If cells are not attached, replace the medium with fresh complete medium. If cells are attached, replace the medium with fresh complete medium.

**Incubation
Atmosphere**

37°C, 5% CO₂, humidified atmosphere.

**Shipping
Conditions**

Cryopreserved cell lines are shipped on dry ice in validated, insulated packaging with sufficient refrigerant to maintain approximately -78 °C throughout transit. On receipt, inspect the container immediately and transfer vials without delay to appropriate storage.

**Storage
Conditions**

For long-term preservation, place vials in vapor-phase liquid nitrogen at about -150 to -196 °C. Storage at -80 °C is acceptable only as a short interim step before transfer to liquid nitrogen.

CHO-CXCR4 | 305411MH

Sterility

The cells are supplied as a frozen suspension in a vial. The cells are not tested for mycoplasma contamination. The cells are not tested for endotoxin contamination. The cells are not tested for viral contamination. The cells are not tested for bacterial contamination. The cells are not tested for fungal contamination. The cells are not tested for parasitic contamination. The cells are not tested for any other contamination.
