

CellA431 | 300112

CellA431 | 300112

Description	CellA431, a human epidermal carcinoma cell line, was established from a 85-year-old male patient with a squamous cell carcinoma of the head and neck. The cells are characterized by their high growth rate and their ability to form colonies in soft agar. The cells are highly tumorigenic and can be used for various studies in cancer biology. The cells are also known for their high expression of EGFR (EGFR) and their sensitivity to EGFR inhibitors. The cells are typically grown in DMEM/F12 medium supplemented with 10% FBS. The cells are also known for their high expression of EGFR (EGFR) and their sensitivity to EGFR inhibitors. The cells are typically grown in DMEM/F12 medium supplemented with 10% FBS.
