

MMQ | 300498

General information

Description	MMQ is a murine mammary epithelial cell line derived from a 7315a. MMQ is a highly invasive cell line, capable of forming large, well-defined mammary tumors in nude mice. MMQ cells are highly proliferative and can be grown in the presence of insulin, transferrin, and selenium (ITS) supplements. MMQ cells are highly tumorigenic and can be grown in the presence of insulin, transferrin, and selenium (ITS) supplements. MMQ cells are highly tumorigenic and can be grown in the presence of insulin, transferrin, and selenium (ITS) supplements.
Organism	Murine
Tissue	Epithelial
Disease	Metastatic mammary carcinoma
Applications	Cell culture, drug screening, tumor models

Cell culture

Age	5 weeks
Gender	Female
Morphology	Epithelial cells
Growth properties	Highly proliferative, tumorigenic

Characterization

Citation	MMQ (Murine Mammary Epithelial Cell Line) Cytion 300498
Biosafety level	1
NCBI_TaxID	10116
CellosaurusAccession	CVCL_2117

Receptors and markers

Receptors expressed	Epithelial markers
