

HB-CLS-2 | 300191

General information

Description	Human breast cancer cell line (HBL-CLS-2) derived from a patient with breast cancer (HBL-CLS-2) derived from a patient with breast cancer.
Organism	Human
Tissue	Human breast cancer
Disease	Breast cancer
Synonyms	HBCLS2

Cell characteristics

Age	50 years
Gender	Female
Ethnicity	White
Morphology	Epithelial cells
Growth properties	Adherent

Cell culture conditions

Citation	HB-CLS-2 (HBL-CLS-2) Cytion 300191
Biosafety level	1
NCBI_TaxID	9606
CellosaurusAccession	CVCL_6214

Cell culture media

Tumorigenic	Yes, tumorigenic in nude mice
-------------	-------------------------------
