

CFPAC-1 | 305066

CFPAC-1

Description	CFPAC-1, 26 years old female patient with advanced pancreatic ductal adenocarcinoma, metastatic disease. The patient was treated with gemtuzumab, paclitaxel, and carboplatin. The tumor was found to be positive for CA19-9, CEA, and PO. CFPAC-1 is a pancreatic ductal adenocarcinoma cell line derived from the patient's tumor.
